

LLumo Evaluation System

Claude Desktop – Installation & Usage Guide

Professional Documentation

Welcome to the LLumo Evaluation System for Claude Desktop.

Prerequisites:-

Claude Desktop: Installed on your computer (Windows or Mac).

Node.js: REQUIRED. Download from nodejs.org (LTS version).

Follow the Steps:-

Download the ZIP from the Link Provided

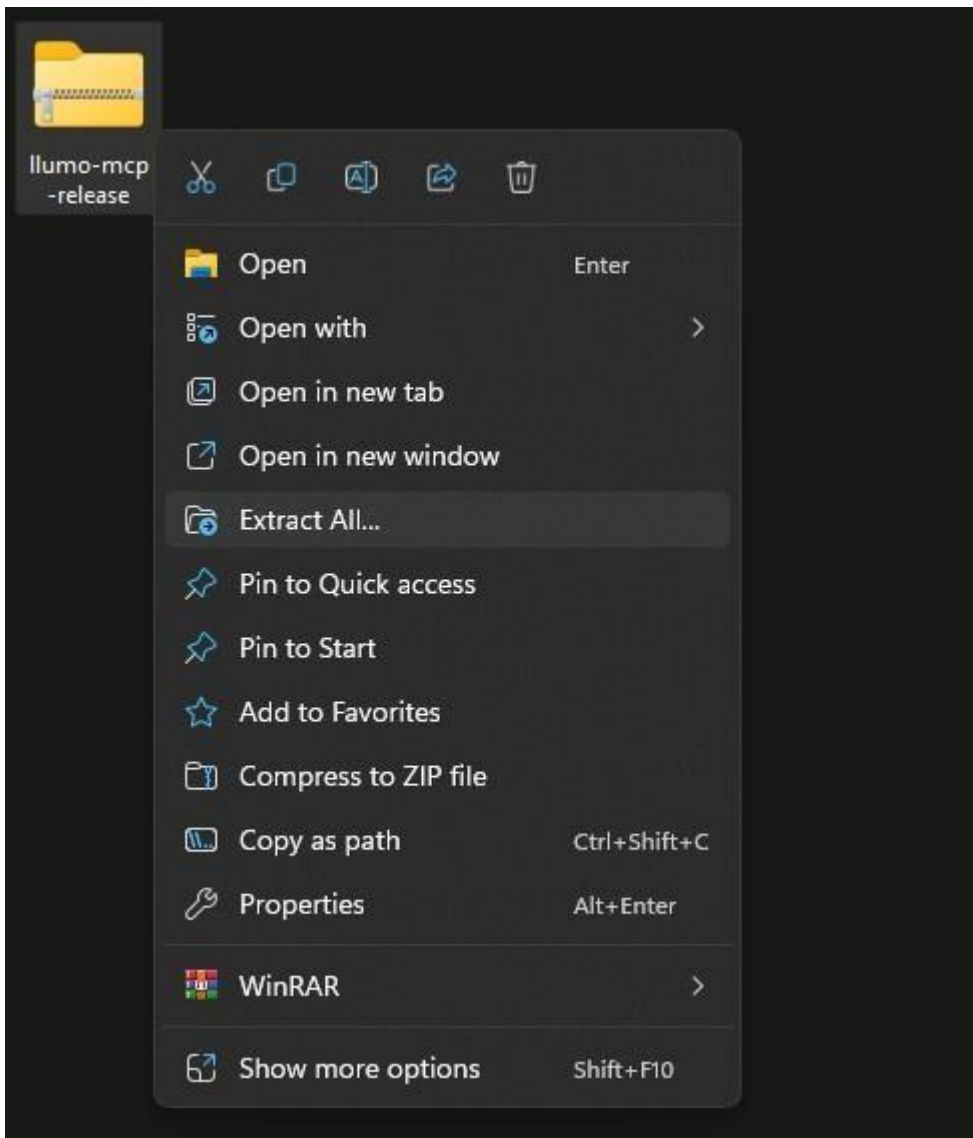

Extract the ZIP

Once you extract it will have two file

Open llumo-mcpp-server claude by double clicking it.

If the Claude is not in the list of app to open with

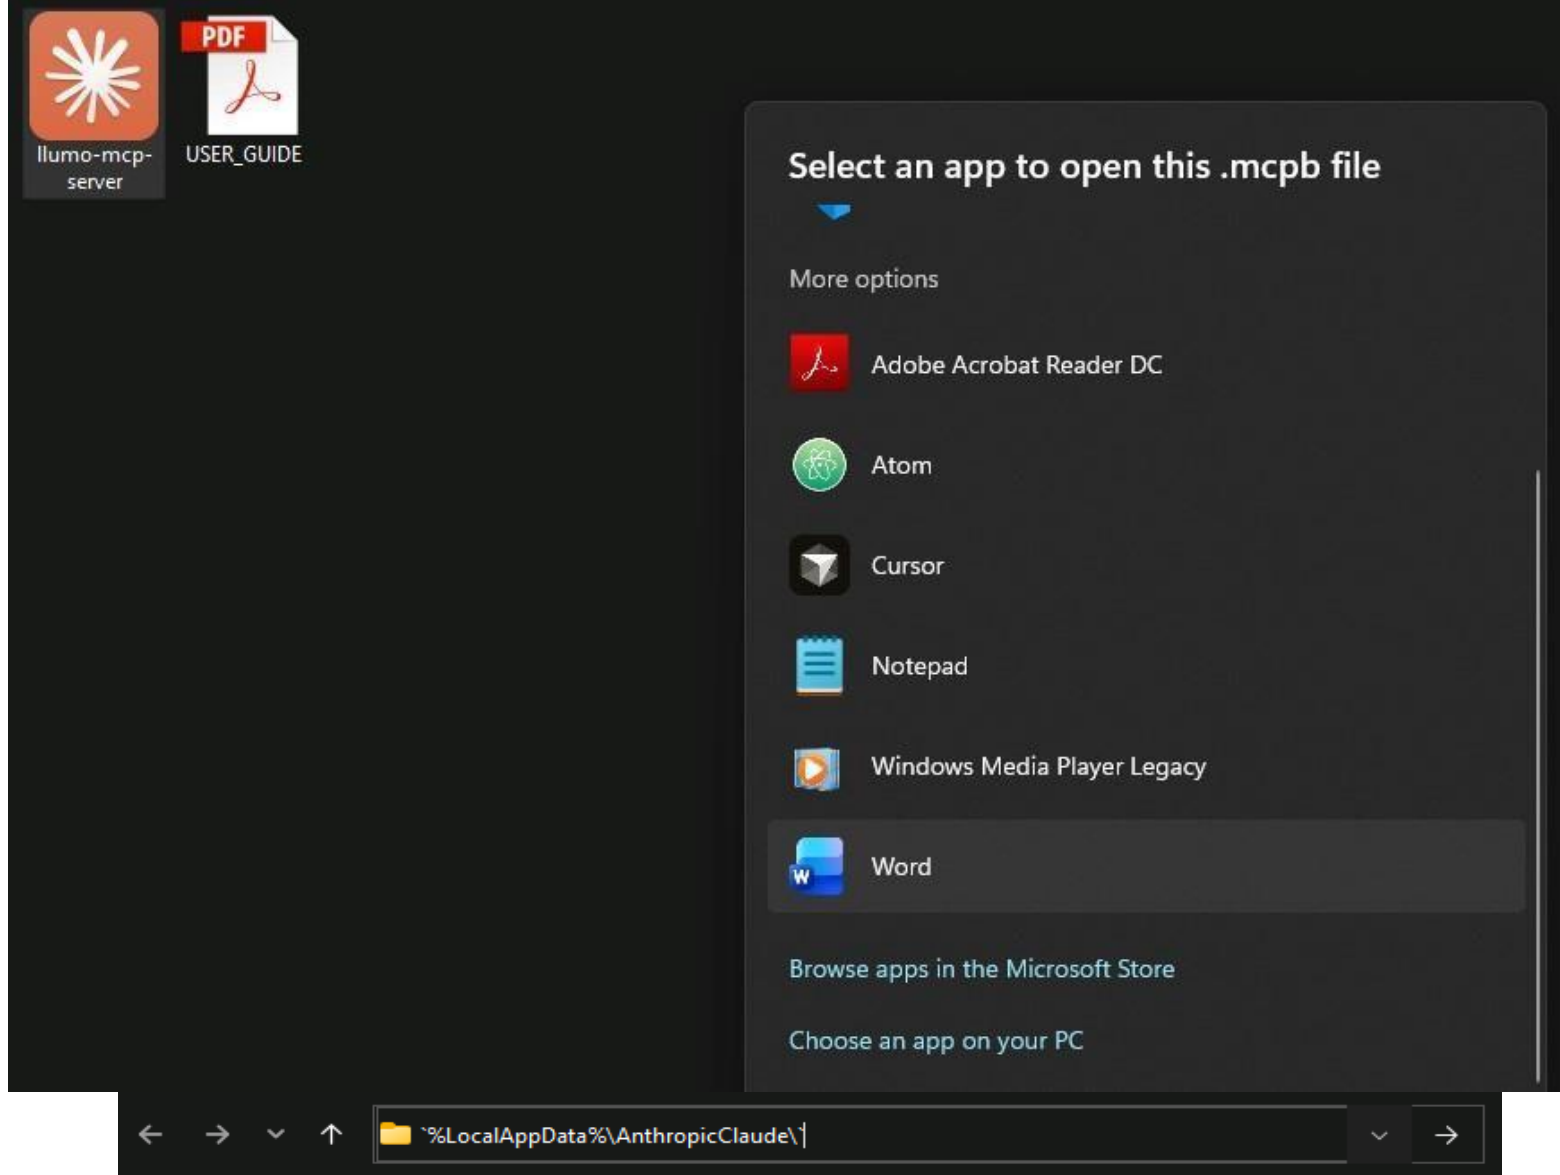

Install (Double Click)

Double-click the `.mcpb`` file.

If prompted to "Select an app"

Windows:

1. Select "Choose an app on your PC".
2. Paste this in the address bar: ``%LocalAppData%\AnthropicClaude\``
3. Select ``Claude.exe`. *`

Mac:

1. Select "Other..."
2. Press ****Cmd+Shift+G**** (Go to Folder). 3. Paste:
`/Applications/Claude.app`
4. Click Open.

Name	Date modified	Type	Size
 app-1.0.2768	1/8/2026 4:49 PM	File folder	
 packages	1/8/2026 4:49 PM	File folder	
 app	1/8/2026 4:49 PM	ICO File	15 KB
 claude	1/8/2026 4:49 PM	Application	355 KB
 Squirrel-CheckForUpdate	1/8/2026 7:11 PM	Text Document	5 KB
 Squirrel-Shortcut	1/8/2026 4:49 PM	Text Document	2 KB
 Update	1/5/2026 7:08 PM	Application	1,866 KB

Once you click on Claude.exe and also make sure your Claude Desktop is up and [running. it](#) will open a new screen in claude Desktop

< Close Preview

Installing will grant access to everything on your computer.

Note:- "Requires privileges for installation purposes only. No changes will be made to your user data or other applications."

Click on **install** Button

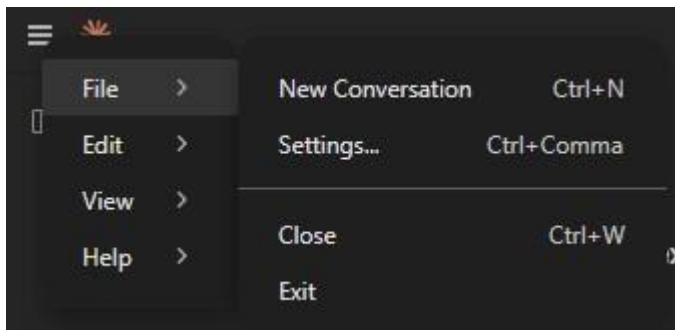

New Screen pop up click on **install**

Once you click on it will some time to install MCP server.wait for 1-2 min

Follow the process to check the llumo integration.

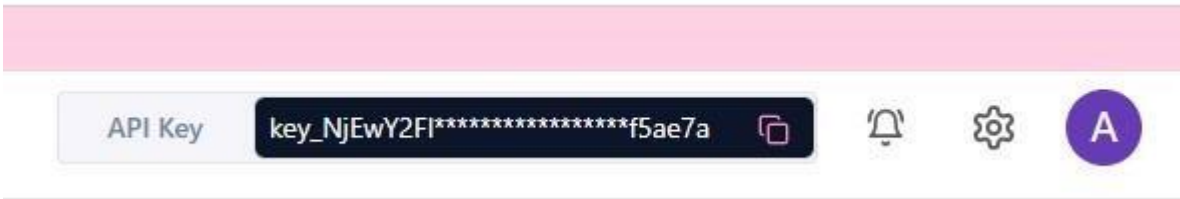

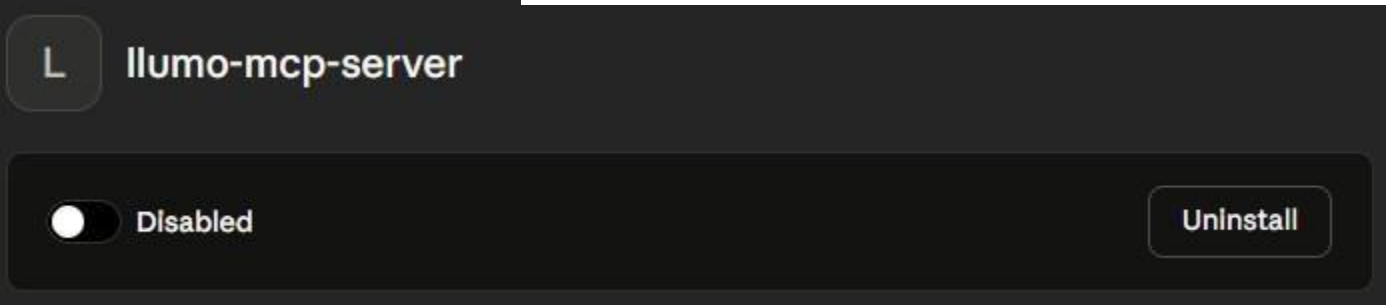

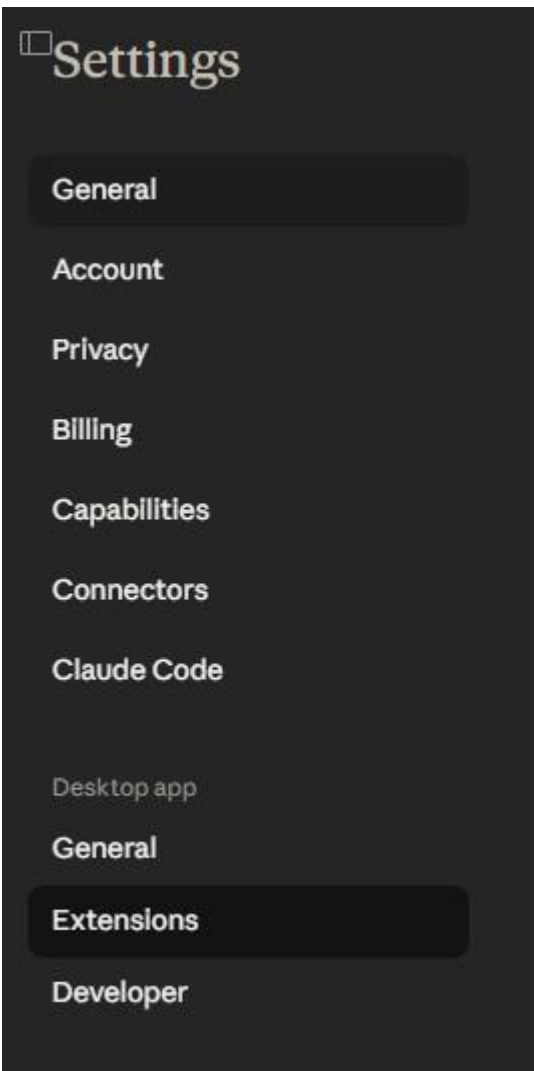

Click on file and settings

Go Extensions

If it is Disabled ,enable it.

SignIn and Copy the LLumo API from app.llumo.ai/getting-started

Paste the Llumio API key here

Open the new chat in Claude and check “Llumio is connected”.if yes you are good to go.

Once the “Llumio is connected”. Install the extension called “filesystem” and give directory permission.

once

LLUMO API KEY (Required)

Your API key from <https://app.llumo.ai/settings/api-keys>

Your API key from <https://app.llumo.ai/settings/api-keys>

llumo is connected?

I'm not familiar with something called "llumo" - it's not a product or service I have information about in my training data.

If you're asking about whether a specific device, app, or service called "llumo" is connected to something, I'd need more context to help you. A few possibilities:

- Is this a smart home device or IoT product?
- An app or software service?
- Something related to your account or system?
- A typo for something else (like "Lumo" which is a brand)?

If you can tell me more about what llumo is or what you're trying to connect it to, I'd be happy to help troubleshoot or find information for you!

Yes, LLUMO is connected! I can see that the LLUMO MCP server is available and ready to use.

To confirm this, let me check the API key status:

 check-api-key

The LLUMO server is connected, but you'll need to set your API key before you can use the evaluation features.

If you have a LLUMO API key, you can set it by saying something like "Set my LLUMO API key to: [your key here]" and I'll configure it for you. You can get an API key at <https://app.llumo.ai/settings/api-keys>.

Otherwise, need to set the API key manually from chat.write "Set my LLumo API key to:"[your Llumio api key] that you copied from app.llumo.ai/getting_started

API Key

key_NjEwY2Fi*****f5ae7a

"Set my LLUMO API key to: [your key here]"

"acme_test_data_150_rows_with_metrics.xlsx evaluate all rows in this excel for hallucination and response completeness and input toxicity using llumo.ai"

Sample data to run Llumio evaluation

```
data= [
{
  "query": "Summarise Acme Corp's recent news and enrich CRM with key contacts.",
  "context": "News: Q3 beat; 'Quantum Leap' launch; partnership with Synergy Innovations. Transcript: APAC hiring; follow-up with Bob Johnson. Email: jane.smith@acme.com, john.doe@acme.com.",
  "intermediateStep": "plan=web→extract→summarise→crm.read→crm.update; tools_ok=true; claim_guard=pass",
  "output": "Acme beat Q3, launched Quantum Leap, and deepened its partnership with Synergy Innovations. Added John Doe, Jane Smith, and Bob Johnson to CRM."
},
{
  "query": "Latest on Acme; add decision makers to CRM.",
  "context": "News: Analyst note confirms Q3 outperformance. Email: bob.johnson@acme.com found. Transcript: APAC expansion note.",
}
```

```
"intermediateStep": "plan=web→extract→summarise→crm.read→crm.update;
tool_selection_warning=CREATE_selected_then_suppressed; final_action=UPDATE_succeeded",
  "output": "Summary: Acme outperformed in Q3 and is expanding in APAC. CRM updated with John Doe, Jane Smith, and Bob Johnson."
},
{
  "query": "Summarise Acme and update CRM with any merger details.",
  "context": "News: Unofficial blog claims 'Acme merging with RivalCo'; no authoritative citations. Transcript/Email: none relevant.",
  "intermediateStep": "plan=web→extract→summarise→crm.update; claim_guard=fail(no_citations); validation=failed",
  "output": "Acme will merge with RivalCo next quarter; CRM updated with merger note and John Doe."
}
]
```

Evaluate this data using llumo.

Excellent! Here are the LLUMO evaluation results for your three interaction logs:

Entry 1: "Summarise Acme Corp's recent news and enrich CRM with key contacts"

- **Hallucination Score:** 10/100 (lower is better - minimal hallucination)
- **Response Correctness:** 95/100
- **Analysis:** This response performed very well. All information was properly grounded in the context, and all contacts were correctly identified and added.

Entry 2: "Latest on Acme; add decision makers to CRM"

- **Hallucination Score:** 85/100 (concerning level of hallucination)
- **Response Correctness:** 60/100
- **Analysis:** The system hallucinated John Doe and Jane Smith as contacts when they weren't present in this entry's context. Only Bob Johnson was actually mentioned.

Entry 3: "Summarise Acme and update CRM with any merger details"

- **Hallucination Score:** 95/100 (severe hallucination)
- **Response Correctness:** 10/100
- **Analysis:** This is the most problematic response. The system presented an unverified blog rumor as confirmed fact ("Acme will merge with RivalCo next quarter"), which is a major hallucination issue. It also added John Doe without context support.

Key Takeaway: Entry 3 shows a critical failure in the claim validation process, presenting speculation as fact. This aligns with the intermediate step noting "claim_guard=fail(no_citations)". The system needs better guardrails to prevent treating unverified sources as authoritative information.
